

### Creating Rivets

This tutorial will show you how to create realistic metal rivets.

Step 1:

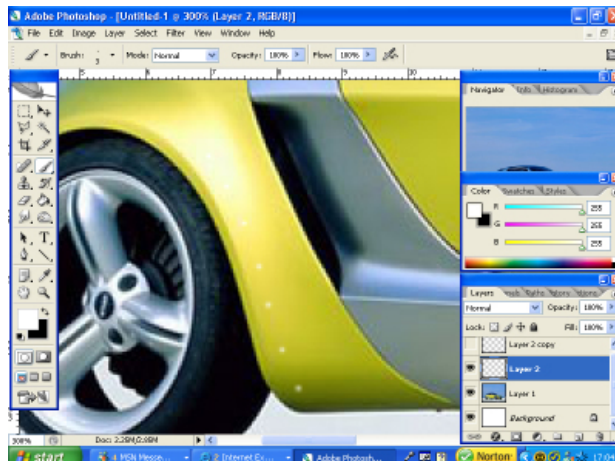

Get a base image. Here we used this smart because of its widened fenders.

DesktopMachine.com

Step 2:

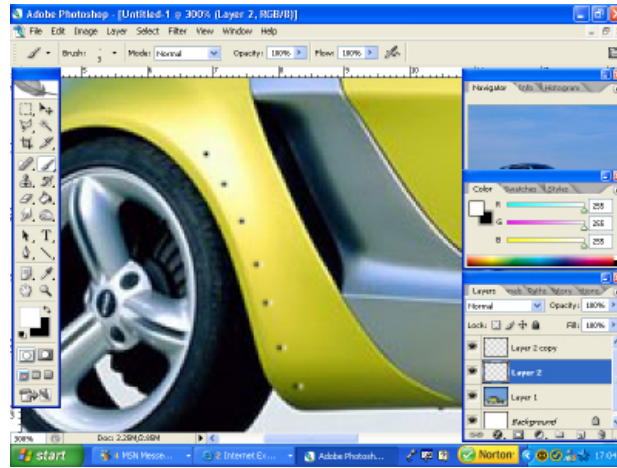

Use the brush tool at size 3px and 0% hardness in white and then make dots where you want the rivets.

Step 3:

Duplicate the layer and move it a tad up and then a tad left, to

make it black. Then choose image/adjustments and then brightness/contrast to 0 until it goes black it took me 3 times.

Step 4:

Finished Product!
